Dear Mr. Esquibel:

The U.S. Environmental Protection Agency (EPA) sampled and analyzed your yard for arsenic and lead in 2000. **Your results show that your yard does not require a cleanup.** The levels of lead and arsenic in your soil are as follows: 149.5 parts per million (ppm) for lead, and 42.4 ppm for arsenic.

EPA looks at decision values to determine whether a cleanup of your yard is needed. Only those yards with levels higher than 400 ppm for lead and 70 ppm for arsenic require a cleanup. If you have any further questions or concerns about this, please feel free to contact me at (303) 312-6601.

Sincerely

A handwritten signature in black ink, which appears to read "Jennifer Chergo".
